

Powervac - CYCLONE FILTER

Powervac - CYCLONE FILTER

Powervac filter separator. Compressed air purified cyclone filter, with filter cartridge or hose filter, particularly convenient for fine dust. Because of the integrated cyclone separator, the tangential air inlet and the optimal arrangement of the plane filter hoses or cartridges enable the application even with high dust exposures. The filter can be installed on both sides, from the raw gas side as well as from the pure gas side. The filter system can also be delivered in reduced pressure impact strength and equipped with bursting discs – or other pressure compensation systems and flame barrier. The filter elements are cleaned automatically by compressed air jets during operation mode.

- Filter area, Hose filter = 5 – 60 m²
- Filter area, Cartridge filter = 19 – 675 m²

Powervac compressed air cleaned cyclone filter with cartridges or hose.

Powervac combi installation.
